DISPLAY MONITOR COLOR

Problem: Color is off. Display set at HighColor (16bit). 1024 X 768 . When I try to reduce the pixel setting back to the 640 X 480 it refuses to allow me to APPLY. The settings jump right back to the higher setting. What can I do. The color looks terrible.

Here something you may want to try:
1. Click START…SETTINGS… Control Panel and doubleclick **Display**
2. Click the Settings Tab…the Advanced tab…. the adapter tab.
3. Click the **Change** button to start the **Update Device Driver Wizard**.
4.   Look at the drivers listed. If there is one listed that is of a later date than the one you're using, select it. APPLY.

Note: make a note of the driver that was listed so if you wish to do so, you can return to that driver.
