Power Point Viewer 2003 and 2007

If you do not have MS OFFFICE Suite on your computer, you may not be able to open files sent to you that have the extensions .ppt, .pot and .pps. A Power Point Viewer may be downloaded free from www.microsoft.com.

Open the viewer, click File and locate the Power Point file you need to open. This will associate all Power Point files with the viewer. The next time you doubleclick a file with the .ppt, .pps or .pot extension, the viewer will automatically open it.
