Download Problem

Q. I cannot download anything from any websites. I can download attachments to email but when I try to download from a web site, I get the message, "You browser security is set so that you cannot download a file from this site."

Ans. Reset the Security of the Microsoft Internet Browser.

1. Open MSIE…and click Tools.
2. Click the Security tab and select Custom Level near the bottom of screen.
3. At the bottom of the Browser list is the Security level. Set the security here to Medium and click Reset.
4. Now try downloading the same file you were trying to download before.

Note: after downloading the file, you may wish to come back to the Security site and set security to Medium-High.
