

Internet Explorer Problem

Sometimes when there are more than one user accounts being used on your computer, one may be able to access IE easily, the other may not be able to access the internet at all using IE.

Possible Solution:

IE v. 7 or 8 settings are separately maintained for each user. For the user account where IE is not working,

- 1. On IE click Tools and select Internet Options**
- 2. Click the advanced tab and select Reset to default settings (near bottom of screen.**
- 3. Click Apply and Ok.**

This will not effect the user account that is working.
