

Internet Explorer Discuss Button

Web sites based on Microsoft Windows SharePoint Services include a special collaboration feature that allows users to communicate with each other on the World Wide Web. Web discussions are threaded discussions that allow users to collaborate on HTML documents or on any document that can be opened with a browser (such as .htm, .xls, .doc, and .ppt files) on a server running Windows SharePoint Services. Users can add and view discussion items located within documents, or general discussion items located in the discussion pane.

To set this feature to a default setting

- a. From within an Internet Explorer session, select "View"
- b. Then, select "Explorer Bar"
- c. Finally, select "Discuss"

This will turn on/off the discussion bar at the bottom of the IE screen.
