

Earthlink Address Book Saved

Web Mail can export your list of contacts to a "comma separated value" file that can be read by many other applications, such as Microsoft Excel.

To export your address book, click the **Export Address Book** link in your Web Mail **Preferences**.

This creates a.csv file which you can import into the OE address book or to a folder on your hard drive, or to a floppy or flash drive.

This copy of the Address Book.csv file can be imported back into Earthlink, to OE or to any other address book that uses a .csv file format.
