Modem On Off

Sometimes it's difficult to get to the back of your computer to unplug the phone line from your modem, or to unplug your cable from the ethernet card. Here is an alternative.

**If your modem doesn't have an on/off switch you can put a cable splitter in the line and turn the cable off when not on line. Also there is a phone switch box that will let you turn off the phone line if you're using dialup. Both can be purchased at Radio Shack.
The phone switch is about $14.95 and the cable one should be similar in price.**
