

The Villages Computer Club

No meeting will take place this Friday 7/13 for the VCC. Please stay tuned for more info about upcoming meetings. VCC meetings will resume at Lake Miona on 7/20 with a Facebook/Social Media presentation.

The VCC web site is a good place to verify any VCC meetings

If you have any questions, email TVCC.Pres@gmail.com

MALWARE

There is a malware out there that could leave your computer unable to go onto the internet effective Monday.

To see if your computer is clear of this malware, go to: www.dns-ok.us/

If you're ok, you will see a green background.

DOWNLOAD A FILE ATTACHED TO AN EMAIL

1. Click the **DOWNLOAD** button at the bottom of the email (AOL), or click the paperclip(Outlook Express)
2. The file will be downloaded to the folder that is set as your default download folder (AOL\Download) or (File set for default in OE)
3. IF using AOL, the file will also pop up and you can click **Open** to open it.

FIND A DOWNLOADED FILE

<< I downloaded files yesterday and I am still hunting for them >>

Do you know the name of the files you downloaded?

1. Click **FILE** at the top of your AOL page.
2. Select **DOWNLOAD MANAGER**
3. Doubleclick the file you want to open and it should open, if not

Write down the name of the file you see listed here and:

1. RightClick START...SEARCH. (or click Start and just type the file name in the search box if using Win 7)
2. Type the name of the file (or part of the name) you want to find in the top NAME box.
 4. Click the down arrow of the LOOK IN box and select the C: drive
 5. Click SEARCH.
 6. The file will then be listed along with the entire path to it's location . e.g.
C:\AOLxxx\DOWNLOAD\ (and the name of the file).
 7. You may doubleclick to open the file from here. Or go to the WINDOWS EXPLORER, click on the C: drive you can scroll down to the AOL folder, click the + sign, scroll further down to the DOWNLOAD subfolder and doubleclick it, you will find the file listed on the right hand side of the page along with all the other files that have been stored in the DOWNLOAD subfolder.

If you're running Win 7,

1. Click Start
2. Type the name of the file, or part of the name in the Search Programs or Files box
3. Click the search tool.

Asf files do not play

Can't play those .asf files??? Try this:

1. Open Internet Explorer
2. Go to Tools in the browser
3. Then to Internet Options
4. Click the Security tab
5. Click Custom Level
6. Under "Active Controls and plug-ins,"
Enable "Download unsigned activeX controls"
Media Player should download the codec automatically after doing the above.

Note: You can download codecs at

<http://www.video-buzz.com/download/Video/InstaCodecs/?f=IZdqIu8TS&a=6591&adid=6746817680>

If you're in the middle of doing something and need info you can type www.google.com and click ENTER to go to that web site, if you're signed online already.

Connect to an Available Wireless Network

When you connect your computer to a network by using an Ethernet cable, Win 7 automatically creates the network connection. To connect to a wireless network for the first time, YOU need to make the connection.

Connect to an Available Wireless Network

1. In the notification area look for either a single monitor screen or a stack of reeds toy. This will be the icon for the wireless connection. Click that icon to open the wireless network box where there will be a list of wireless networks that are available. If the network says Secured, it means you must enter a wep or wpa code before you can connect.

2. There may also be a box to click to show Available Wireless Networks. you should recognize your own wireless network since you set it up.

3. Click the wireless network to which you wish to connect, then click the Connect button. If necessary enter the WEP or WPA password.

4. In Win 7 each network profile includes these settings:

a. Network discovery - can the computer see and be seen by other computers connected to the same network.

b. File and printer sharing - shows if network users can access files and printers you have shared.

c. Public folder sharing - shows if network users can access files stored in the Public folders in your computer.

d. Media streaming - shows if network users can access music, videos and pictures stored in your media library.

e. File sharing - shows the security requirements for devices that connect to your computer's file sharing connections.

f. Password-protected sharing - shows if files are available to any network user or only to users with user accounts in your computer.

g. HomeGroup connections - shows if only those with User Accounts can be joined to your homegroup.

Note: Network connection types and homegroups may not be available on a computer running an earlier version of Windows.

EXE File Attachments

Some Internet Service Providers do not allow .exe files to be sent or received. One such ISP is gmail.com. Some email programs set as default to block executable (.exe) files attached to email received, one that does that is Outlook Express. There is a way around both.

To send .exe file attachments:

1. Locate the .exe file that you wish to send to someone attached to an email by rightclicking Start...Explore and scroll to the folder where the .exe file is stored.

Just one example of the price paid by Americans for freedom not only of Americans but also of other peoples of the world.

A must see video, definitely you will not forget this.

Subject: Fwd: No words can describe this video. Just watch it.
