

GOLDWAVE

Goldwave is an audio recorder/editor program --- <http://www.goldwave.com/> --- that is easy to use and will allow you to copy cassettes. For about \$13 you can buy a cable and an adapter at Radio Shack to connect from the audio-out jack on your cassette player to the audio-in jack on your PC.

Goldwave allows you to copy up to 3 hours of audio as 1 file. Then it allows you to put markers anywhere in that file to break it up into individual songs (it will do this automatically). You can then edit these files with special effects or just burn them on to a CD. For more info call Ted-----259-7157 (The Villages, Fl)
