

Problem copying a DVD disc

Have you tried to do a Copy disc only to get the message that the blank disc doesn't have enough space?

There is a workaround that I use.

- 1. Copy all the files from the Source CD to a folder on your hard drive.**
- 2. Select those files that contain no required action, such as the User Guide, special fonts, etc. then rightclick in the blue area where these files have been selected and click SEND TO: and select the CD/DVD Writer. Allow it to write these files to a disc.**
- 3. Next, select all the other files and click Send To: and select the CD/DVD Writer. Allow these files to be written to the 2nd disc.**
- 4. Now, to install in a different computer, first create a new folder on the computer and give it the name of this CD.**
- 5. Copy all the files from both CDs to this folder.**
- 6. Open the folder and click Setup.**
(It worked for me)
