

## WIN98 CABS Extracting files

Put your win98 cd in the cdrom, holding down the SHIFT key so it doesn't try to install Win98. Click START...RUN and on the run line type this:

Extract d:\X\ /l c:\windows\system Click the RETURN key where d = your cd-rom drive and X=the name of the file you're wanting to extract. This should extract it from your 98 cd and install it in the windows\system directory.

See example below.

EXAMPLE: extract d:\net7.cab sabbri.386 /l c:\windows\system click RETURN
