Computer's Network Identification

Open Computer Management (Local).

1. In the console tree, right-click **Computer Management (Local)**, and then click **Properties**.
2. Click the **Network Identification** tab. This tab shows the computer name, the workgroup or domain to which it belongs, and a brief description of the computer.

Notes:To open Computer Management, click **Start**, and then click **Control Panel**. Click **Performance and Maintenance**, click **Administrative Tools**, and then rightclick **Computer Management** and select Properties, select Computer Name.

- You can view or change system properties on a remote computer or a local computer. To access a remote computer, right-click **Computer Management (Local)**, click **Connect to another computer**, and then select the computer you want to connect to in the list.
- If your computer does not have a description, or you want to change the description, you can enter or edit your computer's description in the **Network Identification** tab. You cannot make any changes if you are logged in under a limited (Windows XP Home Edition) or guest account.

To perform a remote shutdownOpen   Computer Management (Local).

1. In the console tree, right-click **Computer Management (Local)**, and then click **Connect to another computer**.
2. In the **Select Computer** dialog box, click **Another computer**, type the name of the computer that you want to restart or shut down, and then click **OK**. You can also click **Browse** to search for the name of the computer.
3. In the console tree, right-click **Computer Management (Remote computer name)**, and then click **Properties**.
4. On the **Advanced** tab, click **Startup and Recovery**.
5. Click **Shut Down** to open the **Shut Down** dialog box.
6. Under **Action**, select the actions you want to perform on the computer to which you are connected.
7. Under **Force Apps Closed**, select the circumstances under which you want to force applications to close when you shut down or restart the computer, and then click **OK**.

    Notes:To open Computer Management, click **Start**, and then click **Control Panel**. Click **Performance and Maintenance**, click **Administrative Tools**, and then double-click **Computer Management**.

You must be recognized as an administrator or a member of the Administrators group on your computer and on the computer you are managing to perform this task.
