

## Instructions for HP Valentine Card

The following instructions are for HP color inkjet printers, which load from the front. If your printer loads from the back, please consult your printer's user guide. Try printing a test page before using any specialty paper.

Half-page card

1. Download art from HP site
2. Add paper to your printer. You will be printing the outside of the card, so add paper to your printer with the inside of the card facing up.

**NOTE:** Before printing, follow the card manufacturer's instructions to determine which side is the inside and which side is the outside of the greeting card. (Most greeting cards are scored on the outside for easy folding after they are printed.)

3. Open your print dialogue box and select Properties.
4. Set page scaling to None.
5. Set your printer to Best quality.
6. Print the page and set aside to dry completely.
7. To fold the card, align the corners and crease with firm pressure.

**NOTE:** These instructions are for HP color inkjet printers, which load from the front. If your printer loads from the back, please consult your printer's user guide. Try printing a test page before using any specialty paper.

## Materials

- 1 or more sheets of HP Brochure paper, heavyweight paper, or half-fold greeting card paper
- 1 or more envelopes (we recommend A9 envelope size, 5 3/4 x 8 3/4)
- Adobe Reader software
