NTLDR Missing

Problem: When I start my computer it starts the boot process, lists the drives and "Press F1 for Setup and then brings up another black screen with blinking cursor and says NTLDR is missing  Press CTRL + ALT + DEL to restart.  When I do that, it goes through the same process again.

Solution:

1)Insert the Windows XP bootable CD into the computer.
2)When prompted to press any key to boot from the CD, press any key.
3)Once in the Windows XP **Error! Hyperlink reference not valid.** menu press the "R" key to repair Windows.
Log into your Windows installation by pressing the "1" key and pressing enter.
You will then be prompted for your **Error! Hyperlink reference not valid.** password, enter that password.

4) C:\Windows\Bootcfg /Rebuild
5) C:\Windows\Fixboot
6) Reboot your System
