

## **OLD Computer to NEW Computer**

**Two easy ways that I've used to transfer items from my old computer to the new one.**

**1. Create a Home Network so I can see both computers and Share both so I can drag and drop or move anything from either computer to the other one.**

**OR**

**2. Create a folder on the new computer and name it OLD COMPUTER. Plug a flash drive into a USB port of the OLD computer and drag and drop all the items you want to move to the NEW computer. Then, plug the flash drive into the New computer and drag and drop all it's contents to the OLD COMPUTER folder.**

**Note: Programs cannot be dragged and dropped, they have to be installed. IF your new computer is setup for 32 bit instead of 64 bit, you'll be able to install and use most of your old programs.**
