Passwords

Security Use strong passwords that combine upper- and lowercase letters, numbers, and symbols. Weak passwords don't mix these elements. Strong password: Y6dh!et5. Weak password: House27. Use a strong password and write it down in a place where no one would think of looking…but only if you can remember where you wrote it. Do NOT store passwords on your computer unless you use a special program designed for that purpose.

There are different passwords for different purposes.
1. A password that is required to OPEN your computer is called a PowerUP password.
2. A password that allows one to access a particular Users Account
3. A password that allows one to access their email account
   These should be totally different passwords, never the same for all.
