

Readme Files

Question:

I recently purchased a new lap top computer. While trying to transfer some old files to the new unit, the files read "read only". I don't recall saving them.

Answer:

Nearly all programs installed into your computer comes with a Readme file to help you learn more about it. Sometimes very important info about the use of that program is in those readme files.

I read EVERY Readme file in my computer.

You will find it most enlightening to rightclick Start...click Search and into the top box, type Readme.

Next, click the little down arrow in the LOOK IN box and select the Local C: drive.

All Readme files will be listed. READ THEM!!!
