

XP Password Set

Q. What is a windows password and how do I create a windows password?

A. This is a password required in order to load windows and use your computer. Each User may setup his/her own password.

1. Click Start...Control panel.
2. At the bottom of the control panel you'll find Users Accounts, click it.
3. Select the account that is yours (probably the Admin account or owner acct).
4. Give it a name. And you can even browse and add your pic to it if you like. See pic below of mine.
5. Click Create Password and follow instructions.

Note: BE SURE to write this password down someplace, so if you forget it, you can find it again. IF you lose that password, you could be in a heap of trouble.
