

Installing upgrade XP

Alternatively, I'd think you can use the process illustrated here (<http://www.informationweek.com/windows/showArticle.jhtml?articleID=189400897>) for an in-place XP reinstall. I haven't tried this myself (I don't have any bootleg copies of XP to try it with), but I would think it'd work: When asked, enter the license key for the new, legit copy of XP. At the end of the process, you'll probably be asked to activate the new install. When that's done, I think you'll be fully legit. But again, I haven't tried this method myself, so caution is advised.
