

Q. How can I remove those little white arrows on windows shortcuts?

A. Below is a way to remove the white arrows from shortcuts but I would NOT recommend doing so. The little white arrow lets you know that this is ONLY a shortcut and NOT the program itself. Without the white arrow, you may remove a program that you need. But each to his own....

Microsoft's TweakUI can remove the shortcut arrows.

Once you have downloaded and installed it on your machine, launch TweakUI (details below) and click on the Explorer tab. Uncheck the box next to "Prefix 'Shortcut to' on new shortcuts" and click OK.

Microsoft's TweakUI (which is also bundled with PowerToys), may be downloaded from Microsoft's web site.
