Large Block of Hard Drive disappears

How to find

    Run disk defragmenter in analysis mode. Then view the report.
    2. The report should tell where the large block of files were located.
    3. Open a command prompt and navigate to that directory.
    4. Type in delete *.* on that directory and press Enter to delete that directory or sub-directory

    NOTE: This course of action was safe only because these files were located in a sub-directory of
    'Temporary Internet Files.
