Laptop Numeric Keypad

In order to make a full sized keyboard for a laptop, the numeric keypad is laid on top of the "regular" alpha keypad making it an alpha/numeric keyboard.

To access the numbers and symbols seen on some of your keyboard letters, just hold down the FN key that is on the bottom left of most laptop keyboards and press the NUM Lk or Keypad Lk key, or on some laptops, it's the Scroll key + the FN key to switch from alpha keypad to numeric keypad.

When in the numeric keypad mode, you will be unable to type the letters/symbols of your normal alpha keyboard unless you hold down the FN key.

Pressing the FN + Scroll, Num Lk or Keypad LK again will turn off the numeric keypad and you're back to having all keys available to you on your alpha keyboard.
