

## **Excel Word Wrap**

Excel lets you wrap text in a cell.

1. Type some text in a cell.
2. Press Alt + Enter to insert a hard return wherever you'd like the text to wrap to a second line.
3. Type some more of your text.
4. Press Enter when you're done. Excel wraps the text to fit in the cell.
5. Double-click the right edge of the cell's column heading button.  
The column widens to accommodate everything before the hard return.
