MSWord won't load

There might be a bad MS Word add-in that's stopping Word from starting.
Try clicking on the Word icon to start it and then immediately hold down the Shift key on the keyboard while Word starts. This will prevent the add-ins from starting up. Let me know if this works or not. If it works then I will let you know how to fix the bad add-ins.

If the above doesn't work then try this:
1. Click on Start, Settings, Control Panel.
2. Open Add/Remove Programs.
3. Double-click on Office 2000 (or 2001), whichever is installed now.
4. Click on Repair Office.
5. Click on Reinstall Office and then click on Finish.
6. Restart the PC and try opening Word.
