

CD BURNING ERROR MESSAGE

Windows Media Player

I use Nero for most of my CD and DVD burning so I do not have a lot of experience with other freeware, but here are two I have used. First, Windows Media Player Version 10 can burn CDs from MP3 files. It can also rip music in MP3 format if you change the rip setting from its usual WMA setting. Look under Tools, Options, and then go to the Rip Music tab. Here is a [link to the download](#).

Also, Musicmatch Jukebox has a free version in addition to its paid version. It can also burn and rip MP3 files. Here is [the link to the free download](#).

In the past, I have had somewhat the same problem when burning a CD. At the very end of a burn (usually 99% complete) I would receive an error saying the burn could not complete. After some research, I found that having autoplay on might cause the PC to read the almost complete CD and try to run it JUST BEFORE it was complete. Turning off autoplay solved that problem. Most CD recording software now does this automatically during the burn process so you can leave autoplay turned on.
