Word Perfect Address Book to OE

You can import and export data from one address book format to another.
You can import address book data into a field in CorelCENTRAL Address Book by using ASCII text format (.txt files), and **Comma Separated Values (.csv files).(You want to use the .csv format when importing into OE or exporting from WP to OE.)** When you import address book data in these ways, you map fields in the file you are importing to corresponding fields in a CorelCENTRAL address book.
You can import and export Corel Address Book 8 (.abx files) and Microsoft Outlook data to and from CorelCENTRAL Address Book. You can also import and export data in vCard format, which lets you exchange business or personal card information with other users who support the vCard standard, even if they are using another software solution.

1 Click File/export in order to send the WP address book to OE.
2 Follow the instructions on your screen.
